

# Public consultation on EU funds in the area of strategic infrastructure

Fields marked with \* are mandatory.

## Introduction

---

*"A stronger Union needs to be equipped with appropriate financial means to continue to deliver its policies. The Union has changed fundamentally in recent years, as have the challenges it faces. Our Union needs a budget that can help us achieve our ambitions. The Multiannual Financial Framework for the period after 2020 must reflect this."* (Commission Work Programme 2018)

The EU budget currently amounts to less than 1 euro per citizen per day. Although a modest budget, at around 1 % of the EU's gross national income or 2 % of all EU public spending, it supports the EU's shared goals by delivering essential public goods and tangible results for EU citizens. These include: investing in skills, innovation and infrastructure; ensuring sustainable food supply and developing rural areas; promoting joint research and industrial projects; funding shared activities in the field of migration and security; and supporting development and humanitarian aid.

The current Multiannual Financial Framework — the EU's long-term budget — runs until the end of 2020. In 2018, the Commission will put forth comprehensive proposals for the post-2020 Multiannual Financial Framework and for the next generation of financial programmes that will receive funding. These programmes/funds provide financial support to hundreds of thousands of beneficiaries such as regions, towns, NGOs, businesses, farmers, students, scientists, and many others.

The Commission's proposals will be designed to make it possible for the EU to deliver on the things that matter most, in areas where it can achieve more than Member States acting alone. This requires a careful assessment both of what has worked well in the past and what could be improved in the future. What should the priorities be for future policies and programmes/funds? And how can they be designed to best deliver results on the ground?

As an integral part of this process and following on from the [Reflection Paper on the Future of EU Finances](#), the Commission is launching a series of public consultations covering all the major spending areas to gather views from all interested parties on how to make the very most of every euro of the EU budget.

Europe's sustainable growth and competitiveness depend on efficient connectivity. The internal market and territorial cohesion among Member States depend on bridging missing links and removing bottlenecks. Achieving interconnected, interoperable, safe, secure and efficiently managed transport, energy, digital and space infrastructures in Europe requires the ability to plan and invest for the long-term.

EU funds have sought to stimulate European-wide cooperation. The main EU funding tool to fulfil the objective (Article 170 of the EU Treaty) of the establishment and development of trans-European networks in the areas of transport, telecommunications and energy infrastructures is the Connecting Europe Facility programme (CEF). [CEF](#) seeks to boost investment where the EU added-value is highest, notably for cross-border projects and European-wide interoperable systems and services.

Regarding space, the EU has set up three major space programmes; [Galileo](#) and [EGNOS](#) as satellite navigation systems and [Copernicus](#) as an Earth observation system providing data and services. The EU also makes an important investment in the [ITER](#) project, an international cooperation project aiming at the development of fusion as an efficient and sustainable source of energy.

We would like to make a practical suggestion with respect to achieving the digital single market. A key enabler is for any eIDAS smartcard (qualified signature creation device, issued by a qualified trust services provider) to be capable of being used in an interoperable manner across all countries of the EU (both public and private sector).

Quali-Sign is a developer of mobile apps and has successfully implemented eSignatures within our app (Android and iOS) using the Estonian eResidency eIDAS smartcard. From this experience it is clear to us that not all eIDAS smartcards are identical. In order to support cards issued by the other trust providers, we will need to integrate and test with a range of cards. We are now faced with the challenge of procuring additional cards and are currently unable to proceed. We believe this issue has the potential to significantly undermine the objective of achieving the digital single market.

Our recommendation is for CEF Digital to act as facilitator, allowing developers to procure a range of sample cards, via a single request.
